Composite cardboard tubes are one of the packaging types that provide preservation and protection, simultaneously enhancing the appeal and image of a particular product. It consists of a recycle paper tube body which is sealed with plastic or a tin base and a lid. They are primarily used for packaging of premium and promotional items. They are highly flexible as they use less material in comparison to usual cardboard boxes of similar specifications. These tubes are robust, tough to crush and are characterized by their shape retaining property. They are distinctive and are widely used and highly preferred in logistics, adding value to the products.

The food packaging market is by far the largest application sector in the packaging industry, accounting for more than a third of the global packaging market. Dramatic changes in food habits and processed food preferences are driving the food packaging market. The packaged food market in North America and Western Europe has already reached an overall level, and rapid lifestyle changes and economic growth, coupled with population growth in Asia-Pacific countries (such as China and India), have caused the growth rate of food packaging in the region to soar. South America and the Middle East are also experiencing higher growth rates than developed countries. The main reason for the increased preference for processed foods is the shift in population dynamics

from rural areas to urban centers. This has led to the emergence of dual-income urban households that prefer processed foods due to time constraints. Packaged foods have evolved from supermarkets to community stores in countries such as China, India, Brazil and Thailand. However, the market dynamics in North America and Europe are controlled by the branding activities of food processing companies. The materials used for packaging food can also be segmented into plastic, paper and board, metal and glass. They can also be categorized by packaging material type as rigid, semi-rigid and flexible. The preference for different packaging materials also varies with region due to region-specific food habits.
