Composite current collector is a new technology of power battery, divided into PET aluminized film and PET copper-plated film. The core technology is to use ultra-thin polyethylene terephthalate (PET) as the substrate, and double-sided synchronous vacuum coating technology to make composite functional layers. Compared with the traditional pure aluminum foil and pure copper foil, it has the advantages of high safety, energy saving, environmental protection, and low cost.

According to this study, the global Composite Current Collector market size will reach US\$ million by 2029.
