The global Composite Diaphragm for Alkaline Hydrogen Production market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

At present, the membrane widely used in the alkaline hydrogen production industry is a new type of composite membrane based on polyphenylene sulfide (PPS) fabric. Among them, PPS fabric as a substrate can provide certain physical support, and PPS fabric has the characteristics of excellent heat resistance, high mechanical strength, and excellent electrical performance. However, the hydrophilicity of PPS fabric is too weak. If only PPS fabric is used as a separator, it will cause excessive resistance in the electrolytic cell. Therefore, it is necessary to modify PPS fabric to enhance its hydrophilicity.
