Composite Epoxy Systems for General Industry refers to a class of specialized resin systems formulated with epoxy resin as the primary matrix and combined with curing agents, reactive diluents, accelerators, toughening agents, fillers, and other functional additives according to the molding processes, service environments, and performance requirements of industrial composite products. These products generally feature low or adjustable viscosity, good wettability with glass fiber and carbon fiber, suitable working time and curing speed, as well as high mechanical strength, dimensional stability, corrosion resistance, heat resistance, electrical insulation properties, and long-term fatigue resistance. They are suitable for a variety of composite molding processes,

including vacuum infusion, resin transfer molding, pultrusion, filament winding, hand lay-up, and compression molding. Compared with conventional base epoxy resins, Composite Epoxy Systems for General Industry are generally pre-formulated and optimized for specific processing conditions and end-use performance requirements, enabling direct use with reinforcing materials such as glass fiber and carbon fiber. They are mainly used in the manufacture of industrial pipes and fittings, industrial tanks and vessels, industrial structural components, pultruded profiles, electrical insulation composites, and composite components for transportation applications. Their downstream customers mainly include manufacturers of composite pipes, tanks, pultruded profiles, electrical insulation components, and industrial structural components. Key product performance indicators include resin viscosity, pot life, curing temperature and curing time, exothermic behavior, fiber wettability, glass transition temperature, mechanical strength, toughness, chemical resistance, electrical properties, and long-term service reliability.
