The global Composite Inspection Robot market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The composite inspection robot is a compound wheeled inspection robot that combines a 4-wheel drive intelligent mobile robot and a 7-degree-of-freedom inspection payload; its inspection payload is equipped with a variety of sensors and can collect data in a highly flexible posture. The required characterization data of each device greatly expands the perception and detection capabilities; it can realize all-weather, all-round, fully autonomous, and fully intelligent through multi-dimensional real-time perception, online diagnosis, and equipment fault location of equipment and environment in indoor and outdoor scenarios. Diversified scenario inspection and operation maintenance; can be widely used in scenarios such as thermal power, hydropower, photovoltaic, wind power and other power generation sides, power grid sides such as power transmission and transformation, and various power consumption sides such as petroleum, coal, rail transit, and airports.

The composite inspection robot market is in a stage of rapid development, benefiting from the trends of industrial automation and intelligence. It has broad application prospects in energy, manufacturing, infrastructure, medical and other fields. As technology continues to advance, the market size is expected to continue to expand.
