Dental restoration includes a variety of dental procedures used to restore the function of a tooth by replacing missing or damaged tooth structure. A composite filling is also known as a tooth colored filling since the material used in the filling can be closely matched to the color of your teeth. Composite fillings provide durability for small to medium cavities. They are also particularly well suited for treating front or highly visible teeth because of their natural look. A composite filling can be used to restore a cavity in a decaying tooth, to repair a chipped tooth or broken tooth, to replace amalgam fillings or for decreasing the gap between teeth with dental bonding.
