Composite Radome is a radar dome made of composite materials. A radar dome is an enclosure used to cover a radar antenna and is designed to protect the antenna system from the external environment (such as wind, rain, snow, sun, etc.) while maintaining the transparency and transmission performance of the radar signal. Composite materials are usually composed of a variety of materials, such as glass fiber, carbon fiber, epoxy resin, etc., and have the advantages of high strength, light weight, corrosion resistance and good electromagnetic transparency, so they are very suitable for manufacturing radar domes.

The global Composite Radome market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
