A Composite Repair Patch is a prefabricated reinforcement material used to repair damaged composite structures and restore their mechanical integrity. It is commonly manufactured from carbon fiber, glass fiber, aramid fiber, or other high-strength reinforcement materials combined with a polymer resin system. The patch may be supplied as a dry fabric, prepreg, or pre-cured component depending on the repair method. Its core function is to reinforce cracks, delamination, holes, and localized structural damage while minimizing replacement of the original component. Composite Repair Patches are used in aerospace, wind turbine blades, automotive components, marine structures, industrial equipment, and other composite applications requiring lightweight structural repair.

The upstream industry provides carbon fiber, glass fiber, aramid fiber, epoxy or other resin systems, adhesives, films, release materials, and protective layers. The midstream industry converts reinforcement materials into woven fabrics, prepregs, pre-cured
