## Abstracts

The global Composite Scale and Corrosion Inhibitor market size is predicted to grow from US\$ 418 million in 2025 to US\$ 613 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

In 2025, the global production of composite scale and corrosion inhibitors reached 213,600 tons, with an average selling price of US\$2,000 per ton. The global annual production capacity of composite scale and corrosion inhibitors is approximately 400,000 tons, with a gross profit margin of approximately 21.5%. Composite scale and corrosion inhibitors are a class of agents used in water treatment systems, combining the functions of scale inhibition and corrosion inhibition. They aim to prevent scale buildup in water systems, reduce metal corrosion, and extend equipment life. They typically consist of multiple components that work synergistically to achieve a comprehensive effect, rather than a single component performing all functions. The upstream of the composite scale and corrosion inhibitor industry chain includes carboxylic acids, corrosion inhibitor monomers, and chelating agents; the midstream consists of composite scale and corrosion inhibitor manufacturers; and the downstream mainly includes the water treatment and environmental protection industries.

United States market for Composite Scale and Corrosion Inhibitor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
