Photovoltaic backsheet is a photovoltaic encapsulation material located on the back of the solar cell module, which mainly plays the role of weather resistance and insulation protection for the photovoltaic cell module. According to the production process classification, the back sheet is mainly divided into composite type, coating type and co-extrusion type. The composite backsheet is mostly a fluorine film processed with PVF or PVDF resin, which is bonded and compounded by an adhesive and a PET base film. It is the main production method of solar cell backsheet products at present. The KPF/KPE structure is the most common.
