The global Composite Steel Grating market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Composite steel grating is also called composite floor grid, which is a glass fiber reinforced plastic product refined by special process with unsaturated polyester resin as the matrix, alkali-free glass fiber as the reinforcement material. It can be used as a structural material for floors, platforms, ship decks, building planks, etc. with corrosive environments. It has the characteristics of light weight and high strength, corrosion resistance and flame retardant, non-magnetic insulation, bright colors, and various styles and forms for selection.

Composite steel grating is a kind of plate-like material with many spaces, which is made of glass fiber as reinforcing material and unsaturated polyester resin as matrix through special processing. Composite steel grating can be used as structural material. Used as floors, trench covers, platforms, ship decks, stairs, planks, etc. in corrosive environments.

The emergence of composite steel grating has brought great convenience to people. Composite steel grating has strong corrosion resistance, anti-magnetic insulation, natural anti-theft, weather resistance, load-bearing, portability, manufacturability and ease of cutting, etc. Fully complement the deficiencies and shortcomings of steel grating. Therefore, where the composite steel grating has many obvious advantages and can meet the environmental requirements, it gradually replaces the steel grating and maximizes its role. Such as marine areas, hot and humid areas prone to rust, high altitude dew areas, areas prone to corrosion, such as electroplating plants, chemical plants, cooling towers, wharf projects, power plants and sewage treatment plants, etc.
