## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

A compostable mailer is a type of packaging material used for shipping goods that is designed to break down into natural elements when composted under appropriate conditions. These mailers are typically made from renewable resources such as cornstarch, plant fibers, or other biodegradable materials. Unlike traditional plastic mailers, which can take hundreds of years to decompose and may release harmful chemicals into the environment, compostable mailers offer a more eco-friendly alternative. They reduce plastic waste and can be disposed of in compost bins, where they will degrade into organic matter that can nourish soil. Compostable mailers are increasingly popular among environmentally conscious businesses and consumers looking to minimize their ecological footprint.

The global Compostable Mailer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
