Compostable mulch film is an environmentally friendly agricultural material designed to cover soil surfaces, offering benefits such as moisture retention, weed suppression, and temperature regulation while being fully biodegradable. Made from biopolymers like polylactic acid (PLA) or starch-based compounds, it breaks down into natural components under composting conditions, leaving no toxic residues. Compostable mulch films reduce the environmental impact compared to conventional plastic films, eliminating the need for removal and disposal. They are widely used in sustainable farming practices to enhance crop yield while minimizing plastic pollution.
