Biodegradable films, also known as compostable plastics, are a type of packaging made from plant-based materials like starch and cellulose. Unlike most traditional petroleum-based plastics, biodegradable films are designed to break down in landfills or compost bins in a matter of months instead of centuries; making them a much more eco-friendly option for the packaging industry. They offer similar protection against moisture and contamination as plastic does, but with less environmental impact. Biodegradable films

can be used to package food products, fabric goods, consumer electronics and many other items that require secure yet efficient packaging.
