Market vendors are investing in new product development and product innovation owing to increasing demand and adoption of biodegradable paper and plastic packaging. They are continuously developing their product portfolio and investing in materials with specific properties for different applications.

Manufacturers of packaging materials are now seeking to satisfy the needs of their customers by offering the best biodegradable packaging products, thereby differentiating their products from those of their competitors in order to remain competitive in the market. Such new product developments are expected to increase the acceptance of biodegradable paper and plastic packaging over the forecast period.

The shift towards sustainable packaging practices in various industries such as food &

beverage, cosmetics, pharmaceuticals, and agriculture is also driving the development of environmentally friendly materials.

Technological advancements in materials and manufacturing processes have enhanced the performance and viability of these films, expanding their market potential.

As consumers become more environmentally conscious, they are actively looking for products with environmentally friendly packaging. This enables businesses to adapt to changing environments, identify new opportunities, and ensure compliance with relevant standards and guidelines.
