The global Compostable Plastic Film market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Growing awareness about plastic pollution and its impact on the environment has led to a shift in consumer preferences and regulatory measures. Governments, businesses, and consumers are seeking more sustainable alternatives to traditional plastics, which has fueled the demand for biodegradable plastic film. The packaging industry is a significant driver for the biodegradable plastic film market. As consumers demand more eco-friendly packaging solutions, businesses are adopting biodegradable films for applications such as food packaging, bags, and wraps. Biodegradable films offer a sustainable option without compromising on performance and functionality.

Compostable plastic film refers to a type of plastic film that is designed to break down and decompose naturally through the action of microorganisms in the environment. Unlike traditional plastics that can persist in the environment for hundreds of years, biodegradable films offer a more environmentally friendly alternative as they can degrade into natural elements relatively quickly.
