Compound bone peptide preparation, wherein, the compound bone peptide preparation is produced by mixing bone peptide extracting solution and scorpion extracting solution, performing acid treatment and alkali treatment to the mixed solution in sequence, regulating the pH value of the mixed solution after the alkali treatment is performed to be neutral, and ensuring the mixed solution with neutral pH value to contact with active carbon. The compound bone peptide preparation of the invention can be produced to be small capacity injection and freeze-dried powder injection. Compared with the prior method that the bone peptide extracting solution and the scorpion extracting solution are respectively and singly treated and then mixed, the compound bone peptide preparation provided by the invention is produced through acid precipitation, alkali precipitation and active carbon adsorption to the mixed solution of the bone peptide extracting solution and the scorpion extracting solution, can effectively remove impurity generated through the interaction because of the mixing of the bone peptide extracting solution and the scorpion extracting solution, and thereby obviously improving the clarity and reducing the injection irritability of the compound bone peptide preparation (namely improving the injection compliance).
