The global Compound Carbide market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Duplex carbide is an important raw material in the production of cemented carbide. It is a solid solution of WC dissolved in TiC or WC dissolved in TiC-TaC (NbC) at high temperature. It has good oxidation resistance. Duplex carbides containing TaC have good high-temperature hardness and can improve the life of continuous cutting tools. Adding complex carbides to cemented carbide can not only improve the oxidation resistance of the alloy, but also improve the ability of alloy tools to resist crater wear and edge edge, which is an important way to change the properties of cemented carbide. Commonly used compound carbides are composed of binary or multiple solid solutions composed of WC, TiC, TaC, etc., commonly known as CK materials.

United States market for Compound Carbide is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Compound Carbide is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
