The compound emulsifier is a compound of an emulsifier and other emulsifiers of different properties, or a compound of an emulsifier and other similar types, or it can be compounded with different functions. The mixed emulsifier is more stable than the emulsion obtained by a single emulsifier. This is because the mixed emulsifier is adsorbed on the water-oil interface, and the strong interaction between the molecules can form a 'composite', which significantly reduces the interfacial tension. The emulsifier is at the interface The upper adsorption capacity increases, the density and strength of the formed interface film increase, and the stability of the emulsion is greatly improved.
