The global Compound Laser market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The composite laser adopts fiber laser and semiconductor laser as the composite light source. Through the composite welding head, the two lasers can act on the workpiece together. It has excellent welding quality and speed, high adaptability to the working environment, and the photoelectric efficiency is over 30%. The maximum photoelectric efficiency reaches more than 40%, the uniformity of the spot is good, and the energy distribution of the flat-top beam is presented. The low-power semiconductor is suitable for the application of soldering and plastic welding, and the high-power semiconductor is suitable for direct laser welding of thin materials such as stainless steel and carbon steel.

United States market for Compound Laser is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Compound Laser is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
