The Compound Type eVTOL combines many features of traditional fixed-wing aircraft with enhanced cabin layout flexibility. In VTOL mode, it operates like a helicopter during hover and low-speed flight. As speed increases, the rotor speed decreases until the rotors stop, and the wings take over to provide lift while the propeller system generates forward thrust. This design enables higher flight speeds, reduced vibration, and improved maneuverability. However, it also presents challenges like increased structural weight and added drag.

The global Compound Type eVTOL market size is projected to grow from US\$ 625 million in 2024 to US\$ 8873 million in 2030; it is expected to grow at a CAGR of 55.6% from 2024 to 2030.
