Compounding refers to improving material properties and expanding the scope of application by a series of filling and blending methods on the base resin. Extruder compounding modification involves raw materials such as base resin in powder and granular form, talcum powder, calcium carbonate, glass fiber, masterbatch and other powder additives. According to the different formula proportions and raw material properties of the raw materials, professional raw material processing solutions are required to solve the continuous, stable and accurate feeding of the extruder. The finished product transportation is designed according to the characteristics of the product to design the corresponding transportation and blending methods to solve a series of problems such as material abrasion and cross contamination.

The compounding plant solution is a complete set of compounding plant construction processes and material handling solutions designed according to actual needs, aiming to streamline the production process, improve product quality, ensure safety and compliance, and minimize environmental impact.
