The driving factors for microwave anechoic chambers mainly include the following points:

- Technology development:** With the continuous development of microwave technology, microwave anechoic chambers, as an important facility that provides a pure electromagnetic environment, have been widely used. Advances in technology have provided better conditions for the design, construction and use of microwave anechoic chambers.
- Product research and development needs:** In the fields of electronics, communications, aerospace, military and other fields, electromagnetic performance needs to be accurately tested during the product development process. The microwave anechoic chamber provides an ideal testing environment that can effectively simulate the electromagnetic interference situations that products may encounter in actual use, thereby helping R&D personnel optimize and improve products.
- Testing requirements:** During the development and production of radio equipment, radar, navigation systems and other products, electromagnetic compatibility testing, transmission power testing, etc. are required. Microwave anechoic chambers provide an isolated, repeatable testing environment that can accurately evaluate the electromagnetic performance of products.
- Safety requirements:** In some fields, such as aerospace, military, etc., the electromagnetic compatibility of products is directly related to safety. Using a microwave anechoic chamber to conduct electromagnetic performance testing can ensure that the product can still work normally when subjected to electromagnetic interference, improving product safety and reliability.
- Industrial development and market demand:** With the rapid development of the electronic information industry, the demand for microwave anechoic chambers is also increasing.
