The global Compressed Air Aftercooler market size is predicted to grow from US$ 724 million in 2025 to US$ 881 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

A compressed air aftercooler is a crucial device in compressed air systems. It is primarily used to cool the hot compressed air that comes out from an air compressor. After the air is compressed, it becomes hot and contains a certain amount of moisture and oil vapor. The aftercooler works to lower the temperature of the compressed air, which causes the moisture and oil to condense. This allows for the easy removal of these impurities through separators and filters. By doing so, it significantly improves the quality of the compressed air, ensuring that it is clean, dry, and suitable for various applications. These applications range from powering pneumatic tools in industrial manufacturing and construction to being used in critical processes in the food and beverage, medical, and electronics industries, where high-quality compressed air is essential to prevent equipment damage, product contamination, and ensure smooth and efficient operations.

United States market for Compressed Air Aftercooler is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Compressed Air Aftercooler is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Compressed Air Aftercooler is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
