## Abstracts

The global Compressed Air Gun market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A compressed air gun is a type of non-lethal gun that uses compressor air as its power source to blow, suck, and transport materials. There are two types of air guns: a hand-held type, which is mainly handled by the user's hand, and a type that is attached to a specific machine or tool for work. Since the inside of a compressed air gun is basically hollow and free from obstructions caused by other parts, it is safe to work with because no objects can get stuck inside it during work.

The compressed air gun is used in a variety of manufacturing facilities. The blow-off function can be used to clean the work site by blowing off fine dust, etc. The air pressure generated by the blow-off can also be used for cooling and drying. Air-blast type machines are also available for spraying abrasive materials, paints, and liquids, and for surface treatment such as rust removal and descaling. With the suction function, liquids and powders can be suctioned and collected for cleaning.

United States market for Compressed Air Gun is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Compressed Air Gun is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
