According to this study, the global Compressed Air Pipes & Fittings market size will reach US\$ 4770 million by 2031.

Compressed air pipes and fittings form the distribution network that delivers pressurized air from compressors to end-use equipment in industrial and commercial applications. Pipes are typically made of materials such as aluminum, galvanized steel, copper or engineered plastics to withstand system pressures, minimize corrosion and reduce pressure loss over long runs. Fittings—including elbows, tees, reducers, unions, ball valves and specialized quick-connect couplings—enable tight, leak-free connections, directional changes, flow control and modular system layouts. Compression fittings, featuring a nut, sleeve and fitting body, provide reliable, tool-free assembly and ease of maintenance. Properly selected and installed piping and fittings ensure efficient system performance, energy savings and operational safety across manufacturing, automotive, food processing and pharmaceutical sectors.

Global Compressed Air Pipes & Fittings Market consists of Steel Pipes, Aluminum Alloy Pipes, Plastic Pipes and Pipe Fittings, etc. As a traditional product, steel pipe still occupies the mainstream market due to its low price and long life. But all factors considered, aluminum is becoming the premier choice for compressed air piping. Aluminum piping does not corrode and it's leak resistant. The light weight of aluminum makes it easy to handle and install, especially with push together connectors. All these factors make it a highly recommended material for clean air applications. Aluminum Alloy Pipes is estimated to account for a revenue share of 30% in 2025. In 2024, the Aluminum Alloy Pipes segment is estimated to be valued at US\$ 924 million which is expected to reach at US\$ 1514 million in 2031, with a CAGR of 7.2% over the forecast period.
