A compression reducer is a device that compresses waste by applying high pressure to reduce its volume. By applying high hydraulic pressure, refuse that would otherwise take up a lot of space can be compacted. In addition to reducing waste storage space, it can also reduce the cost of waste collection and transportation. They are especially used at food processing sites, construction sites, and plastic product factories where large amounts of waste are generated. In addition, large size machines are used in direct connection with production lines.

The global Compression Reducer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
