A compressor for a chiller is a key component responsible for circulating refrigerant through the system to enable heat exchange and cooling. It works by compressing low-pressure refrigerant vapor into high-pressure vapor, which then passes through a condenser to release heat. Common types of compressors used in chillers include centrifugal, screw, scroll, and reciprocating compressors, each suited to different capacities and efficiency needs. The compressor's performance directly affects the energy efficiency, reliability, and cooling capacity of the entire chiller system, making it a critical element in HVAC applications across commercial, industrial, and institutional buildings.
