The global Compressor Rotor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The compressor rotor is one of the core components of the compressor, used to compress gas or steam and push it into the system. It usually consists of a rotor and a stator. The rotor is the rotating part of the compressor, which sucks gas or steam into the compression chamber through rotational motion and compresses it before being discharged. The rotor usually has a blade or spiral shape and can generate compression through rotational motion. Common types of compressor rotors include centrifugal rotors, screw rotors, and reciprocating rotors. The stator is a supporting component of the rotor, providing support and sealing for rotor rotation. The stator is usually composed of an outer shell and a sealing device, which can ensure that gas or steam will not leak when the rotor rotates.

United States market for Compressor Rotor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Compressor Rotor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
