The global Compressor Starter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The starter is used to connect the compressor starting winding circuit at the moment of power-on, so that the starting winding has current flowing, and a magnetic field with a different direction from the running winding is generated, which is synthesized into a rotating magnetic field to make the motor rotate. After the motor rotates, the starting winding of the motor is disconnected to start the motor running again.

Compressor Starters are devices that provide the necessary power and control to initiate the motor of a compressor, ensuring a smooth and safe start-up process. Several factors contribute to the growing demand for Compressor Starters in the market:

Expanding HVAC Industry: The HVAC (Heating, Ventilation, and Air Conditioning) industry is witnessing significant growth due to increased construction activities and rising demand for climate control systems. Compressor Starters are vital in HVAC systems to start and control compressors in air conditioners and refrigeration units.

Energy Efficiency and Cost Savings: Compressor Starters play a crucial role in optimizing energy usage by providing soft start and stopping functions, reducing power surges, and avoiding unnecessary wear on compressor components. This leads to energy efficiency and cost savings for end-users.

Motor Protection: Compressor Starters often incorporate motor protection features such as overload protection, short circuit protection, and phase loss protection, safeguarding

the compressor motor from damage and extending its lifespan.

Safety and Reliability: Compressor Starters ensure safe and reliable compressor operation by preventing uncontrolled starts and providing features like under-voltage protection and emergency shutdown.

Retrofit and Upgrades: The aftermarket demand for Compressor Starters is driven by the need to retrofit existing compressor systems with more efficient and advanced starter technologies.
