A computer expansion card is a printed circuit board that can be inserted into an electrical connector or expansion slot (also called a bus slot) on the computer motherboard. These slots are located on the computer's system board and are used to connect the expansion card to the system bus, thus becoming an interface between the 'system bus and peripherals'. Expansion cards allow the functions and interfaces of a computer system to be expanded or supplemented in a way that is suitable for the tasks it will perform. Expansion cards can add additional functions to a computer system, such as network functions (network cards), graphics processing functions (graphics cards), audio processing functions (sound cards), etc. Users can select and install corresponding expansion cards according to specific needs, thus achieving a certain degree of customization.

The global Computer Expansion Card market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
