The global Computer Monitor Hanging Lamp market size is predicted to grow from US\$ 125 million in 2025 to US\$ 239 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

In 2025, global sales of Computer Monitor Hanging Lamp reached approximately 2.55 million units, with an average market price of about USD 50 unit, an annual production capacity of roughly 3.1 million units, and an industry-average gross margin of approximately 22%.

A Computer Monitor Hanging Lamp is an independent LED task-lighting device mounted on or clipped to the upper edge of a desktop monitor. It is designed to project directional light onto the keyboard, documents and immediate desk surface while reducing direct reflection on the display. The product typically consists of a slim LED light bar, a counterweight or clip-on mounting structure, USB or USB-C power input, adjustable brightness and color temperature, and touch, wired or wireless control. Higher-end models may incorporate asymmetric optical design, ambient-light sensing, automatic dimming, high-CRI LEDs, anti-glare optics, RGB backlighting, smart-home connectivity, gaming-light synchronization and compatibility with curved, ultrawide or multi-monitor setups. The product is mainly used in office workstations, home offices, online learning, programming desks, creative work, gaming setups and other desktop computing environments where localized, screen-friendly task lighting is required.

Based on our research, the Computer Monitor Hanging Lamp should be viewed as a specialized desktop lighting device rather than a generic desk lamp. Its product value is built around three design elements: monitor-mounted installation, directional task lighting and reduced screen reflection. The category emerged as a response to

increasingly dense digital workstations, where users need to illuminate keyboards, documents and desk surfaces without occupying additional desk space or creating glare on the monitor. The most important technical differentiator is the optical structure, especially asymmetric light distribution, which determines whether the light can be directed toward the desk instead of the display panel. Mechanical compatibility is another key product boundary, as the device must fit different monitor thicknesses, bezels, curved panels and ultrawide displays. For this reason, the category should be analyzed separately from general desk lamps, ring lights, TV light bars and ambient RGB lighting.

From a supply perspective, the market has developed into a layered structure. Premium branded players lead market education and product definition, mass consumer electronics brands expand affordability and channel reach, gaming peripheral brands bring RGB and ecosystem integration, while OEM/ODM suppliers in China and Taiwan support private-label and long-tail distribution. This structure explains why the visible market contains both highly recognizable brands and a large number of lower-transparency marketplace labels. Official product pages from major brands show a clear convergence around anti-glare optics, adjustable color temperature, brightness control, wireless controllers, automatic dimming and compatibility with different display types. At the manufacturing layer, OEM/ODM suppliers are important because many private-label brands do not disclose their actual production entities.

Demand growth is driven primarily by home offices, hybrid work, gaming setups, ultrawide and curved monitors, content creation and night-time computer use. The product is not a mandatory PC accessory, so the total addressable market remains much smaller than monitors or mainstream smart lighting. However, the category benefits from a relatively clear user pain point: traditional desk lamps often occupy space and may cause screen glare, while monitor-mounted light bars create a cleaner and more controlled lighting setup. Future competition is expected to focus on optical quality, monitor compatibility, smart control, RGB backlighting, industrial design and channel execution. The main substitution risks come from conventional desk lamps, smart ambient lighting, built-in monitor lighting features and low-cost private-label alternatives.
