The global Computer on Module market size is predicted to grow from US\$ 3219 million in 2025 to US\$ 7146 million in 2031; it is expected to grow at a CAGR of 14.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The Computer on Module (CoM), which is sometimes referred to as a System on Module, is an alternative to single board computers for embedded systems offering a more flexible and contoured solution. It is designed to plug into a carrier, or base board, and is generally a small processor module with a CPU and standard I/O capability. The complex effort associated with designing a CPU subsystem is avoided by using CoM functionality and a custom base board. A Computer on Module (COM) offers a unique approach to product development and the often fully custom electronics typically contained within sophisticated devices. A CoM helps system designers realize a fully customized electronics assembly, complete with custom interfaces and form factor without the effort of a ground-up electronics design.

The major players in global computer on module (COM) market include Kontron, Congatec, Advantech, etc. The top 5 players occupy about 32% shares of the global market. Europe and North America are main markets, they occupy about 75% of the global market.
