The global Computer Optometry Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

A computer optometry machine is an instrument used to check various parameters of human eyesight, including diopter, axial length, astigmatism, etc.

Computer optometry machines are widely used and are mainly used in eye hospitals, optical shops and other places for eye examinations, glasses and other operations. As people's work pressure increases, myopia rates increase, and the number of patients with eye diseases increases, the demand for computerized refractors also increases. At the same time, electronic products have become indispensable tools for modern people. Long-term use of electronic products can easily lead to eye fatigue and vision loss. Therefore, many companies and schools have begun to pay attention to the eye health of employees and students, further promoting the market demand for computerized optometrists.
