The global Computer Vision Cameras market size is predicted to grow from US\$ 6691 million in 2025 to US\$ 13572 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

In 2025, global Computer Vision Camera output reached about 13 million units, with capacity of 18 million units per year, average unit price around USD 525, and gross margins about 32%. Computer Vision Cameras are specialized imaging devices designed to capture visual data that can be processed by machine vision algorithms, AI models, or image processing systems to enable automated inspection, object recognition, measurement, navigation, and decision-making in machines. These cameras integrate high-resolution image sensors (CMOS or CCD), optics, onboard processors, and high-speed interfaces (such as GigE Vision, USB3 Vision, Camera Link, or CoaXPress) to deliver real-time image data to industrial computers, edge AI devices, or embedded systems. In the supply chain, upstream segments include semiconductor and optical component suppliers providing CMOS/CCD image sensors, lenses, infrared filters, and image signal processors, as well as electronic components such as FPGAs and interface chips; the midstream layer consists of computer vision camera manufacturers that design and assemble industrial cameras, smart cameras, and embedded vision modules; and the downstream ecosystem includes system integrators, robotics companies, and automation solution providers deploying these cameras in applications such as industrial inspection, autonomous robots, logistics sorting, smart surveillance, medical imaging, and autonomous vehicles.

United States market for Computer Vision Cameras is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
