The global Concentric Eddy Current Separator market size is predicted to grow from US\$ 64.09 million in 2025 to US\$ 89.49 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Concentric Eddy Current Separator is a highly efficient separation device that uses concentrically arranged rotors and magnetic fields to generate eddy current effects, which are used to separate non-ferromagnetic metals (such as aluminum, copper) and non-metallic materials. It uses a high-speed rotating magnetic rotor to generate eddy currents within the metal particles, thereby separating the conductive materials from the mixture. The concentric design makes the magnetic field more uniform, suitable for processing homogeneous waste streams. The equipment is known for its high efficiency and low maintenance requirements, and is widely used in waste recycling, mineral processing and resource separation in industrial production.
