The global Concentric Tube Heat Exchanger market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A concentric tube heat exchanger is a type of heat transfer device used to exchange thermal energy between two fluids. It consists of two or more tubes, one within the other, forming concentric circles. The two fluids, usually at different temperatures, flow through the inner and outer tubes, allowing heat to transfer from one fluid to the other. This type of heat exchanger is commonly used for applications where high heat transfer efficiency is required.

Researchers and engineers are exploring advanced surface enhancements such as microstructures, nanocoatings, and textured surfaces to improve heat transfer rates and overall efficiency of concentric tube heat exchangers.
