Abstracts

The global Concrete Cutting Blades market size is predicted to grow from US$ 553 million in 2025 to US$ 682 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

In 2024, global Concrete Cutting Blades production reached approximately 5.5 million units, with an average global Rental price of around US$ 100 per unit. Concrete cutting blades are specialized rotary tools designed to cut through concrete and other hard materials such as masonry, stone, asphalt, and brick. These blades are typically mounted on saws like angle grinders, circular saws, or concrete saws (also known as cut-off saws or walk-behind saws). A moderately automated production line can produce approximately 1,000 to 3,000 blades per day, depending on blade size, segment quantity, and production cycle time. Highly automated or continuous production lines with optimized workflows may achieve higher capacities, reaching 5,000 or more blades per day. Typically, the gross profit margin for concrete cutting blades ranges between 20% and 40%, depending on factors such as product quality, production efficiency, scale of manufacturing, and market pricing. The upstream segment of the concrete cutting blades market primarily encompasses the raw materials, component suppliers, and manufacturing technologies essential to producing these specialized cutting tools. Understanding the dynamics of this upstream market is crucial to grasp the overall industry’s supply chain robustness, cost structures, and technological innovations. The steel core or body of the blade provides structural integrity and must withstand high-speed rotations and extreme mechanical stresses during cutting operations. Typically, manufacturers rely on high-grade alloy steel sourced from large steel producers globally. Leading steel suppliers operate in China, Japan, Germany, the United States, and India. The upstream steel market is characterized by cyclical price fluctuations influenced by raw iron ore availability, energy

costs, global demand, and trade policies. Steel quality variations also impact blade durability and flexibility. The downstream customer market for concrete cutting blades encompasses a diverse range of end-users across various industries that require efficient and precise cutting solutions for concrete, asphalt, masonry, and other construction materials. Construction and Infrastructure includes general contractors, civil engineering firms, road construction companies, and urban development agencies involved in building foundations, roadways, bridges, tunnels, and other critical infrastructure. Cutting blades are used for tasks such as cutting concrete slabs, walls, and precast panels, facilitating demolition, remodeling, and new construction. Municipal and highway maintenance departments rely heavily on concrete cutting blades to repair damaged roads, cut expansion joints, and remove deteriorated pavement. Specialized blades designed for asphalt and reinforced concrete cutting are critical in this segment.

United States market for Concrete Cutting Blades is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Concrete Cutting Blades is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Concrete Cutting Blades is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
