The global Concrete Fiber market size is predicted to grow from US$ 1147 million in 2025 to US$ 1413 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Concrete fiber is a special high performance fiber used in concrete / mortar; it can increase the structural integrity of concrete. Concrete fibers mainly include steel fibers and synthetic fibers.

The concrete fiber market has been experiencing steady growth, driven by increasing demand for durable, crack-resistant construction materials across infrastructure, residential, and commercial projects. Fiber-reinforced concrete enhances structural integrity, reduces shrinkage, and improves load-bearing capacity, making it a preferred choice in applications such as pavements, tunnels, industrial flooring, and precast products. The growing emphasis on sustainable construction and the adoption of advanced building techniques further fuel the market’s expansion.

Various types of fibers—such as steel, glass, synthetic, and natural fibers—are used depending on the application requirements, with synthetic and steel fibers being particularly prominent. Emerging economies are seeing heightened infrastructure development, while developed markets are focusing on upgrading aging structures, both contributing to increased usage of fiber-reinforced concrete. Innovation in fiber materials and mixing technologies also supports broader adoption, offering cost-effective and high-performance solutions to modern construction challenges.
