Low Pressure Plasma Spraying (LPPS) is a technique used for coating materials onto a substrate. In LPPS, a plasma torch is used to heat and ionize a gas, typically argon, creating a plasma jet. The material to be coated is fed into the plasma jet, where it is melted and accelerated towards the substrate. Upon impact, the molten material solidifies and forms a coating on the substrate.

Titanium is a commonly used material for LPPS due to its high strength, low density, and excellent corrosion resistance. LPPS titanium coatings have applications in aerospace, medical implants, and industrial equipment.
