A concrete placing system is a set of equipment and machinery used to transport and place concrete in construction projects. It includes various components such as concrete pumps, concrete mixers, concrete conveyors, and concrete placing booms.

Concrete pumps are used to transport liquid concrete from the mixing plant to the construction site. They can be either truck-mounted or trailer-mounted and are capable of pumping concrete at high pressures and long distances.

Concrete mixers are used to mix the ingredients of concrete, including cement, aggregates, water, and additives. They come in different sizes and types, such as drum mixers and twin-shaft mixers.

Concrete conveyors are used to transport concrete horizontally or vertically within the construction site. They can be belt conveyors, screw conveyors, or pneumatic conveyors.

Concrete placing booms are used to distribute and place concrete in specific locations, such as high-rise buildings or hard-to-reach areas. They are typically mounted on a tower or a truck and can be operated remotely.
