The global Concrete Shrinkage-Reducing Admixtures market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Shrinkage-reducing admixtures (SRAs) are used to reduce the shrinkage of concrete, whether from drying or self-desiccation. In contrast to other concrete admixtures, they are used in rather large amounts. This is because the interfacial area at which they must act (liquid–vapor) increases radically in the course of drying. Indeed, hardened cementitious materials have large internal surface area, which when covered only by liquid films, provides a very large interfacial area where the SRAs must remain active.

United States market for Concrete Shrinkage-Reducing Admixtures is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Concrete Shrinkage-Reducing Admixtures is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
