The global Condensing Agent for Peptide Synthesis market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The choice of condensing agent for peptide synthesis affects the formation of peptide bonds and the occurrence of side reactions, which is the guarantee for the synthesis of various structurally diverse biologically active peptides.

The role of the condensing agent for polypeptide synthesis: it can condense amino acids and amino acid esters to form peptide bonds and eliminate side reactions; it can improve the purity and yield and has a high activation effect; it can form activated intermediates with amino acids and effectively catalyze amino acids and amino acid esters condensation reaction. It should be noted that different condensing agents are suitable for different reaction conditions and amino acid sequences. When using a condensing agent, the appropriate condensing agent should be selected according to the specific synthesis scheme and reaction conditions, and the relevant laboratory safety practices should be followed.
