Electronic component carrier tape is a strip product used in the field of electronics and packaging. It has a specific thickness, and holes (also called pockets) for holding electronic components and positioning holes for indexing are evenly distributed along its length. When electronic components are mounted, the tape or cover tape is peeled off, and the automatic mounting equipment takes out the components in the pockets one by one through the precise positioning of the index holes of the carrier tape, and mounts them on the printed circuit board one by one, so as to realize the fully automatic, high-efficiency, high-reliability and low-cost installation of chip electronic component packaging.
