Conductive flooring is a kind of floor that can dissipate the electric charge by adding conductive material when it is grounding or connecting to lower potential. Conductive flooring can either be static dissipative or static conductive.

Conductive linoleum flooring is a highly superior flooring material with excellent conductive properties, suitable for production environments sensitive to electrostatic discharge (ESD). This type of flooring is made from conductive materials, allowing it to effectively dissipate static charges and rapidly route them to ground, minimizing the potential risks associated with ESD. Conductive linoleum flooring comes in two main types, static dissipative and static conductive, offering options to meet specific requirements. With the ongoing development and increasing reliance on electronic

products, the demand for ESD management is becoming increasingly crucial, presenting a significant market trend for conductive linoleum flooring. They not only offer excellent electrostatic management performance but also protect critical equipment and electronic components from electrostatic damage. By grounding through connections such as copper strips to wall outlets, these flooring systems can effectively channel static charges, reducing the risk of adverse events in production environments. The widespread adoption of conductive linoleum flooring will continue to be favored by industries to ensure efficient production and the quality of electronic products.
