Conductive polymers have a wide variety of applications in various industries, ranging from production of medicine, healthcare, renewable energy devices, such as photovoltaic cells, to manufacturing of display materials, chip packaging, sensors, plastic transistors, and ultra-capacitors. Conductive polymers are used in a wide range of electrical appliances such as energy devices, electronics, and actuators, and as an alternate to inorganic semiconductor counterpart.

The growth of the global conducting polymers market is mainly driven by the increasing demand for advancements in miniaturization of electronic components. Compact electronic devices are comparatively faster than larger devices as the signals in compact devices do not have to travel as far as in the larger devices. Lower costs, greater density, and higher speed are the additional benefits of miniaturization. At present, there are a mass of manufacturers in the market. Major manufacturers in the market are 3M, RTP Company, Parker Hannifin, Sumitomo Chemical, etc. Major manufacturers are mainly concentrated in North America, Europe.

According to this study, over the next five years the Conductive Polymers market will register a 7.9% CAGR in terms of revenue, the global market size will reach US\$ 6167.6 million by 2024, from US\$ 4208 million in 2019. In particular, this report presents the global revenue market share of key companies in Conductive Polymers business, shared in Chapter 3.
