According to our LPI (LP Information) latest study, the global Cone Beam Breast CT(CBBCT) market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Cone Beam Breast CT(CBBCT) is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Cone Beam Breast CT(CBBCT) market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Cone Beam Breast CT(CBBCT) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Cone Beam Breast CT(CBBCT). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Cone Beam Breast CT(CBBCT) market.

CBBCT is a dedicated breast CT imaging technology based on cone beam X-rays and flat-panel X-ray detectors.

Radiation dose from cone-beam breast CT depends on the intended use (such as screening or diagnostic evaluation) and whether the study also involves the use of contrast media. CONCLUSIONS: Compared with mammography, cone-beam CT of the breast provides a significant improvement in radiation dose to soft-tissue lesions when used for screening. Radiation doses for diagnostic imaging with cone-beam breast CT are within the range of diagnostic mammography. Studies have shown that when cone-

beam breast CT is used for diagnostic evaluation, the average glandular dose ranges from 7 to 13.9 mGy [45-48]. With the development of technology, the average glandular dose will gradually decrease.
