According to our LPI (LP Information) latest study, the global Cone Co-rotating Twin-screw Extruder market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Cone Co-rotating Twin-screw Extruder is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Cone Co-rotating Twin-screw Extruder market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Cone Co-rotating Twin-screw Extruder are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Cone Co-rotating Twin-screw Extruder. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Cone Co-rotating Twin-screw Extruder market.

Cone Co-rotating Twin-screw Extruder means that the screw shape in the extruder is conical, and the rotation direction of the two screws is the same. The extruder using conical co-directional twin screw technology is called conical co-directional twin screw extruder. The advantages of conical twin screw extruder are large extrusion force, but poor plasticizing performance, low output and high energy consumption; Although the parallel twin-screw granulator has good plasticizing performance, it has small extrusion force, low output and large energy consumption, so it is not satisfactory in actual use. In order to overcome the above shortcomings, the conical twin screw extruder has not only

good plasticizing performance, but also good extrusion force. The conical twin screw extruder, whose conical screw rotates in the same direction, makes the processed plastic in the barrel after entering the barrel, in the barrel around the conical twin screw into a figure-8 extrusion, increase the plasticizing time, reduce the friction between the plastic and the barrel screw, so as to ensure the plasticizing quality, reduce energy consumption; Because the screw used is conical, the good extrusion force performance of the conical twin-screw granulator is maintained.

The market prospect for cone co-rotating twin-screw extruders is robust. These machines play a vital role in various industries, including plastics, food processing, pharmaceuticals, and chemicals. Their capability to efficiently blend, compound, and process materials with high precision and consistency drives demand. In plastics, they enable the production of customized polymers with desired properties. In the food industry, they facilitate efficient mixing and extrusion of ingredients. However, competition from alternative technologies and the need for specialized expertise in operation and maintenance can pose challenges. As industries seek enhanced production efficiency and product quality, the demand for advanced extruders is likely to persist, especially with ongoing technological advancements and customization options.
