Cone Penetration Testing Trucks are specialized vehicles equipped with advanced geotechnical testing tools used to assess subsurface soil conditions. These trucks perform the CPT process by driving a cone-shaped probe into the ground at a constant rate, measuring resistance to penetration and other parameters such as pore water pressure and soil friction. The data gathered provides detailed information about soil stratigraphy, density, strength, and other geotechnical properties. CPT trucks are widely used in construction, environmental assessments, seismic analysis, and offshore projects, offering a fast, reliable, and cost-effective method for soil investigation in various terrains.
