A confined space tripod system is a piece of equipment designed to safely lower and raise workers into and out of confined spaces, such as tanks, vaults, and manholes. The tripod system typically consists of a sturdy tripod structure with adjustable legs for stability, a winch or hoist system for lifting and lowering workers, and a harness or other fall protection equipment for worker safety. The tripod system is set up around the entrance to the confined space, providing a secure anchor point for the worker to attach their harness and be lowered into the space. The winch or hoist system is used to control the descent and ascent of the worker, allowing them to safely enter and exit the confined space.
